# INTRUSION DETECTION SYSTEM USING A NEURAL NETWORK

PHASE THREE PRESENTATION

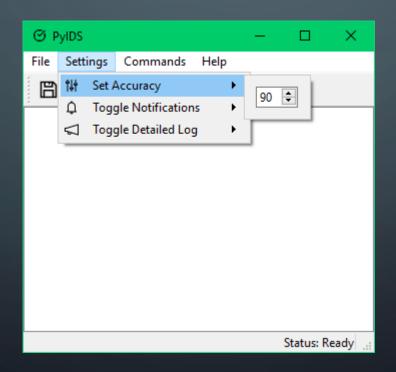

**BLAKE KNEDLER** 

#### AGENDA

- Action Items
- Component Design
- User Manual
- Formal Technical Inspection
- Test Plan Update
- System Test Procedure
- Assessment Evaluation
- Project Evaluation
- Demonstration
- Questions and Comments

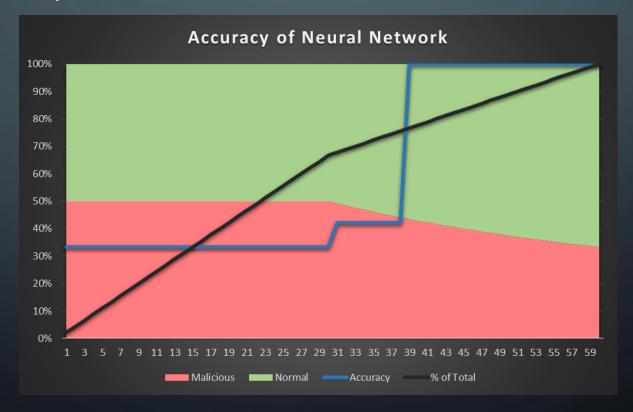

#### **ACTION ITEMS**

- Add minimum accuracy setting in the GUI
  - Shown in the User Manual portion and demonstration

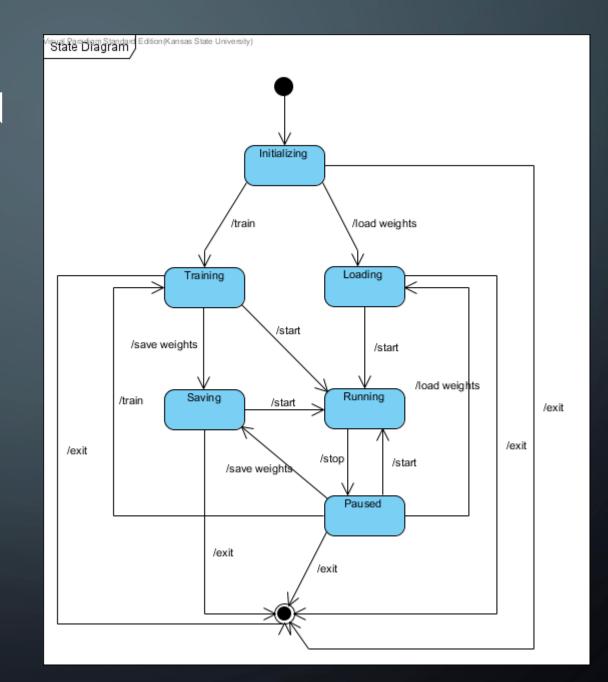

## ACTION ITEMS

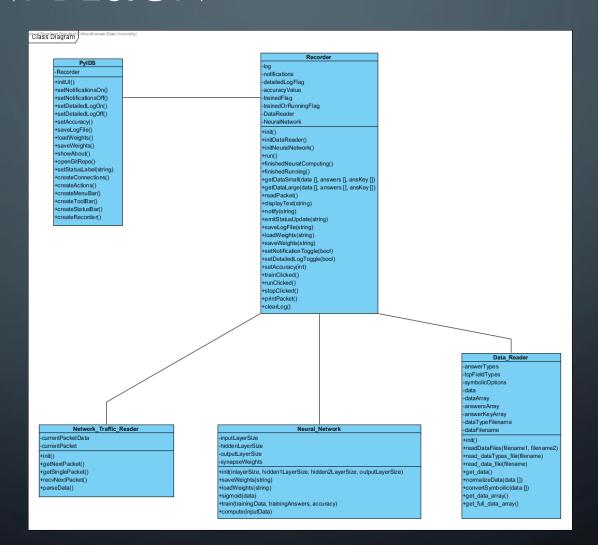

- Analyze the training of the Neural Network
  - Shown in the Project Evaluation section

• State Diagram

Sequence Diagrams

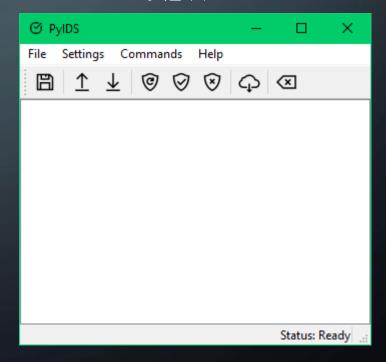

#### USER MANUAL

- Added descriptions to all major function interfaces
- Changed design of GUI for final product

#### OLD

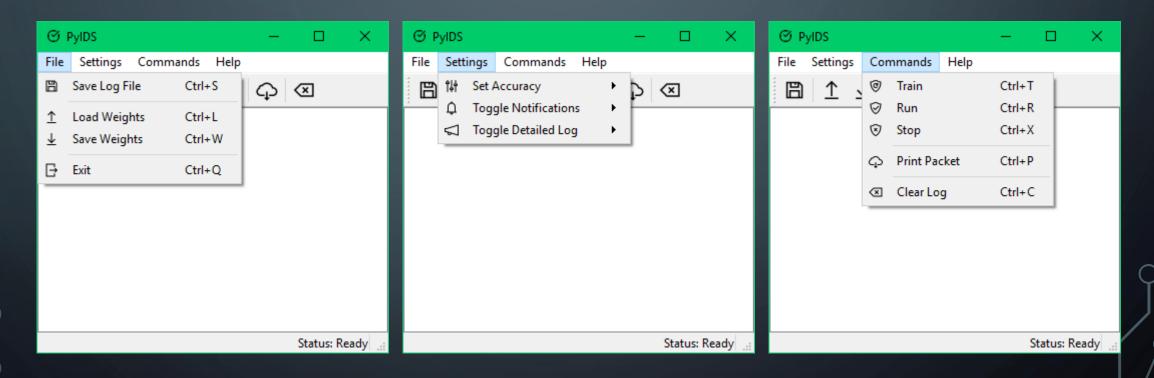

#### NEW

#### **USER MANUAL**

New Menu Options

# FORMAL TECHNICAL INSPECTION

• All items were passed

Inspection Item	Pass/Fail	Comments
Does the code work and perform the intended task?	Pass	Code seemed to work as intended
Is the code easily readable?	Pass	Very easy to read and great use of comments
Is there duplicated code?	Pass	I didn't observe any duplicated code
Is the code modular?	Pass	Code was broken down nicely
Are there unused variables or functions?	Pass	I didn't observe any unused variables or functions
Is there commented out code?	Pass	There was no commente out code that i could spot
Are all debugging statements removed?	Pass	I didn't see any left over debug code
Are variable and function names meaningful?	Pass	Some names were not completely clear to me, bu i believe they would be cle to a user that understood the functionality a little better
ned By: Tracy Marshall	ray Morshall	than myself

T .: T	D (E.)	<b>G</b> .
Inspection Item  Does the code work and perform the intended task?	Pass/Fail Pass	Comments  Many errors output on the console, and some elements non-functional. However, within expectations for prototype.
Is the code easily readable?	Pass	More narrative comments would be helpful. However, coding style and structure is very understandable.
Is there duplicated code?	Pass	Some places repeat the same calculation a few times when a temporary variable would have helped. But, no major code duplicated.
Is the code modular?	Pass	The code appears to be sufficiently modular for the project size.
Are there unused variables or functions?	Pass	The "vulture" utility detects several unused functions and variables. However, it is not excessive and further development could correct.
Is there commented out code?	Pass	There is a small amount of commented out code.
Are all debugging statements removed?	Pass	No debugging statements were found that are not appropriate.
Are variable and function names meaningful?	Pass	Consistency in naming, specifically class naming style, would be beneficial. The names themselves, however, are appropriate.

Inspected by Keith Moyer

#### TEST PLAN UPDATE

- Decided to go with Unit Test type test plan along with a system test of the important pieces of the GUI
- Added additional tests
- Used Python's common unit testing framework unittest
- Wrote a System Test Procedure for the GUI critical requirements of notifications and log output
- Updated Test Plan to reflect changes

#### SYSTEM TEST PROCEDURE

Testing Notification and Log output

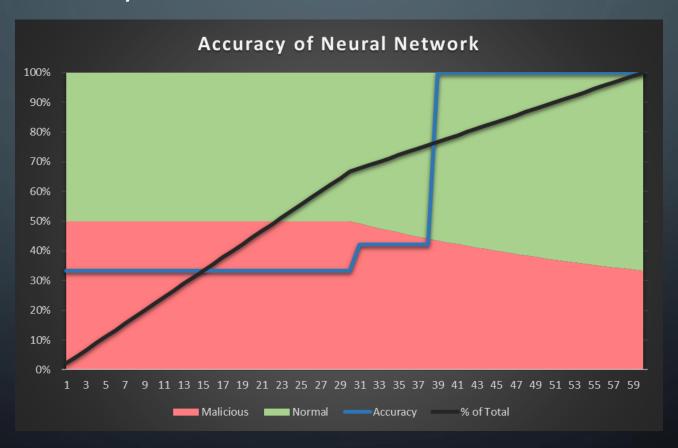

Step	Action	Expected Outcome
1	Start the PyIDS Application	PyIDS is shown and operating
2	Toggle Notifications "On"	
3	Press "Print Packet" button	Notification appears
		Packet information displayed in log
4	Press "Save Log File" button	Save File browser appears
5	Enter name for log file and press save	
6	Open up system file browser	
7	Go to location designated for log file	
8	Open log file saved	Log file contains packet information

## ASSESSMENT EVALUATION

- All tests passed
- Tested all critical requirements

#	Requirement(s)	Test Name	Time (sec)	Result
1	SR4.1	test_DR_getDataArray	11	PASS
2	SR4.1	test_DR_getFullDataArray	15	PASS
3	SR4.1	test_DR_readData	11	PASS
4	SR3.1, SR4.1	test_NN_determineMalicious	11	PASS
5	SR3.1, SR4.1	test_NN_trainAndCompute	12	PASS
6	SR1.1	test_NTR_getNextPacket	6	PASS
7	SR2.1	test_NTR_getSinglePacket	5	PASS
8	SR5.1, SR6.1	System Test	N/A	PASS

Neural Network Analysis

SLOC and Time Estimates to Actuals

	SLOC	Time (months)
Estimate	4000	6.59
Final	1172	6.33
Accuracy	29.30%	96.11%

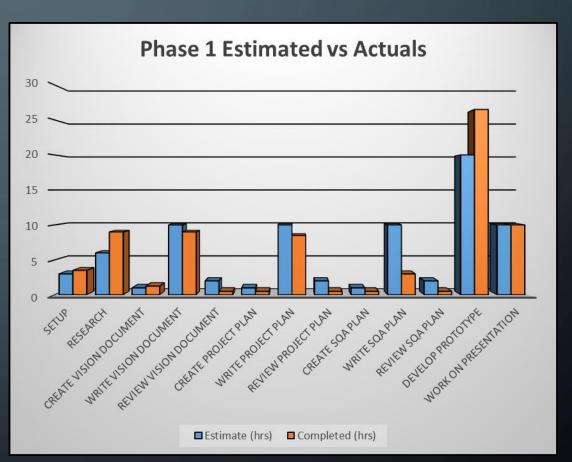

• Time per Phase

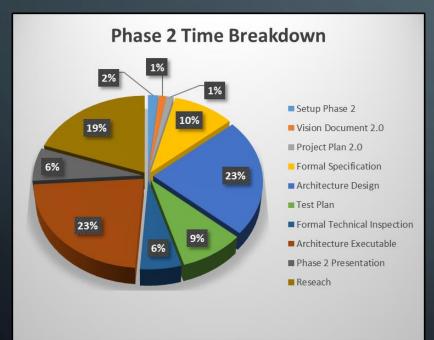

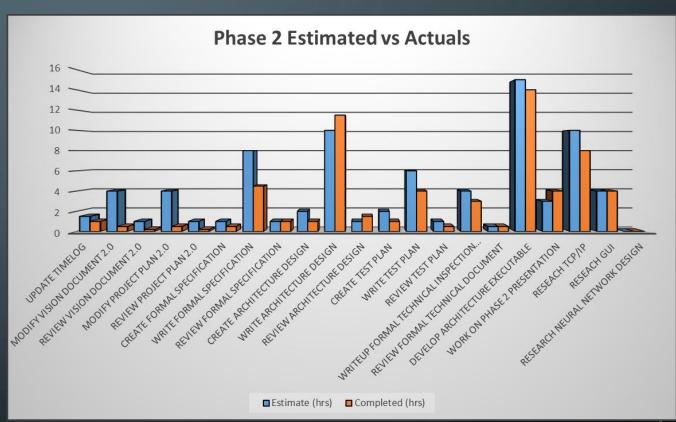

• Phase 1

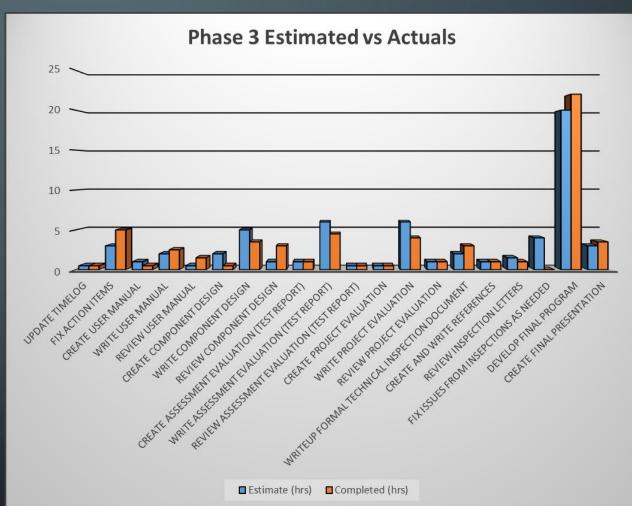

Phase 2

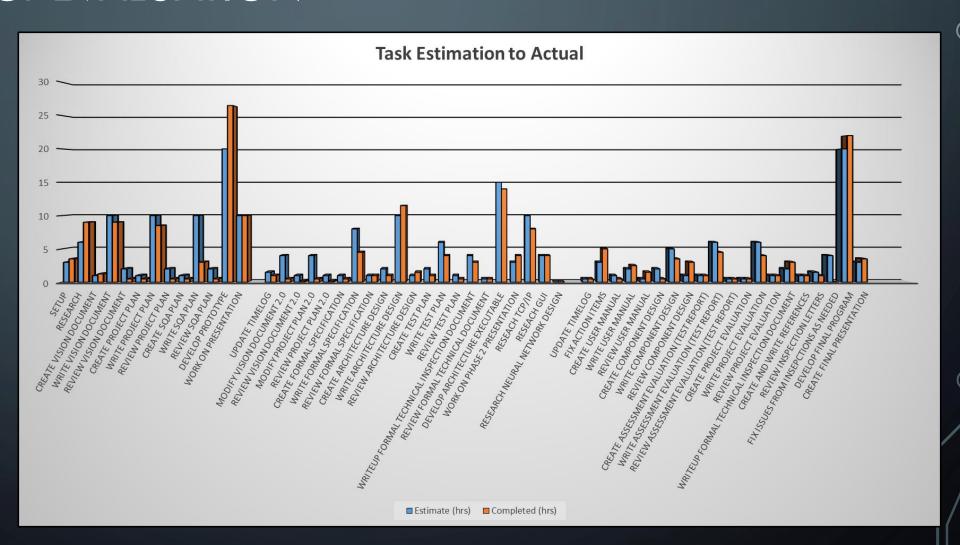

Phase 3

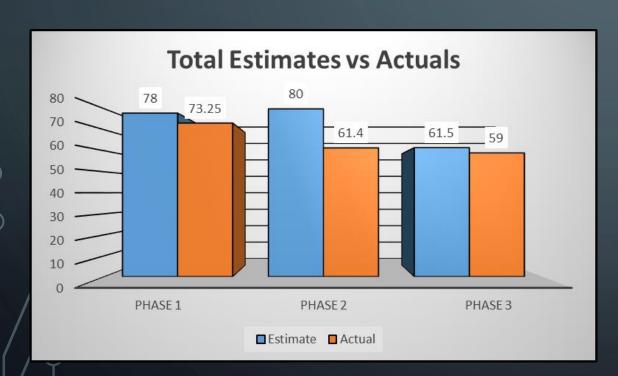

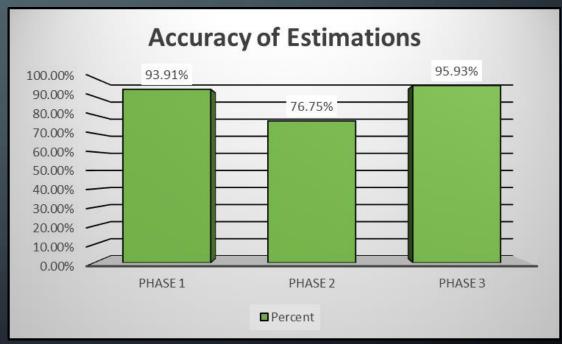

All Tasks

Estimation Accuracy

- Lessons Learned
  - Neural Networks
  - Networking
  - DOS Attacks

- Future Work
  - Gather better training data
  - Expert System Tracking
  - Prevent along with detection
  - Feedback false positives/negatives
  - Efficiency Improvements

# DEMONSTRATION

- GitHub Repository Location:
  - <a href="https://github.com/bneedy/PyIDS">https://github.com/bneedy/PyIDS</a>
- All components of the system are working
